Introduction

Namespace BOOSEapp

Classes

AppCanvas

Custom canvas implementation used by the BOOSE interpreter. Responsible for drawing shapes and managing the drawing cursor.

AppCommandFactory

Custom command factory used to create BOOSE commands. It extends the default command factory and returns application-specific command implementations.

ApplicationConfiguration

Bootstrap the application configuration.

Circle

BOOSE command that draws a circle on the canvas.

Form1

Main user interface for the BOOSE interpreter. Allows the user to input BOOSE programs, execute them, and display graphical output on the canvas.

MoveTo

BOOSE command that moves the drawing cursor to a specified position on the canvas.

Program

Rectangle

BOOSE command that draws a rectangle on the canvas.
